A Guide to Medical Devices for Migraine

Medical devices for migraine that are FDA-cleared can be powerful tools to add to your migraine treatment toolbox! They are:

1. **Proven to help prevent, reduce and stop migraine symptoms**

2. **Medication-free with limited to no side effects**

3. **Used safely in combination with other treatments**

GET TO KNOW THE DEVICES

Nerivio Infinity (REN)

A discreet, upper arm wearable, controlled by your smartphone. It uses "Remote Electrical Neuromodulation" to trigger the brainstem's natural mechanism to stop pain.

gammaCore (nVNS)

A handhelp device placed against the neck. It activates the vagus nerve by gentle electrical stimulation, helping to both relieve and prevent head pain.

Cefaly (eTENS)

A small device worn on the forehead, controlled by an app. It stimulates the trigeminal nerve, the main highway for migraine pain, by sending tiny electrical pulses.

HeadaTerm2 (eTNS)

A small device worn on the forehead that uses non-invasive neuronal electrical stimulation technology. It stimulates the trigeminal nerve to reduce migraine-related signals.

SAVI Dual (sTMS)

A device held to the back of the head. It uses a magnetic pulse to disrupt the electrical wave associated with migraine. Low-frequency electromagnetic fields calm hyperactive nerves.

Relivion (eCOT-NS)

A headset that targets both the trigeminal and occipital nerves at the same time. It stimulates 6 nerve branches of the occipital and trigeminal nerves with "calming" electric pulses.

Which migraine device is right for you?

These 6 FDA-cleared migraine devices for age 18+ provide non-invasive treatment. They target nerves to help prevent, reduce, or stop symptoms—without the risk of side effects that often accompany medications.
